7. waiting to uninstall the License from your machine
8. reboot

1. Extract **Ultimate.RLM.Floating.License.Server.zip** into your Desktop
2. open Terminal
3. type **cd ~/Desktop/Ultimate.RLM.Floating.License.Server/RLM\_Linux-64/**
4. type **chmod +x ./rlm\_uninstall.sh**
5. type **./rlm\_uninstall.sh**
6. in the Terminal type your login password
7. waiting to install License on your machine
8. reboot

## How to Install & Uninstall the RLM License Manager in your Client's

First you must install the RLM license Manager on your server and then obtain the Server **HOST\_NAME** or server **IP** address

How to get your server **HOST\_NAME**

Windows: Open the Command Prompt and type : **hostname**

Mac OS: Open the Terminal and type : **hostname -sf**

Linux: Open the Terminal and type : **hostname**

How to get your server **IP Address**

Windows: Open the Command Prompt and type: **ipconfig**

Mac OS: Use **System Preferences > Network**

Linux: Open the Terminal and type : **hostname -i**

Do the following steps on your client's

1. Extract Ultimate.RLM.Floating.License.Server.zip
2. Go to to **Ultimate.RLM.Floating.License.Server** folder
3. copy folder **RLM\_Windows** into C:\
4. Run command prompt as administrator

To Install the Licenses on your client[s]

5. type cd **RLM\_Windows**
6. type **rlm\_client.cmd --add YOUR\_SERVER\_HOST\_NAME**

**OR**

6. type **rlm\_client.cmd --add YOUR\_SERVER\_IP\_ADDRESS**

For example your server Host Name is : vfx\_server

**rlm\_client.cmd --add vfx\_server**

For example your server IP Address is : 192.168.1.50

**rlm\_client.cmd --add 192.168.1.50**

To Uninstall the Licenses from your client[s]

type **rlm\_client.cmd --remove**

1. Extract **Ultimate.RLM.Floating.License.Server.zip** into your Desktop
2. Open Terminal
3. type **cd ~/Desktop/Ultimate.RLM.Floating.License.Server/RLM\_macOS**
4. type **chmod +x ./rlm\_client.sh**

To Install the Licenses on your client[s]

type **./rlm\_uninstall.sh --add YOUR\_SERVER\_HOST\_NAME**

**OR**

type **./rlm\_uninstall.sh --add YOUR\_SERVER\_IP\_ADDRESS**

For example your server Host Name is : **vfx\_server**

**./rlm\_uninstall.sh --add vfx\_server**

For example your server IP Address is : **192.168.1.50**

**./rlm\_uninstall.sh --add 192.168.1.50**

To Uninstall the Licenses from your client[s]

**./rlm\_uninstall.sh --remove**

1. Extract **Ultimate.RLM.Floating.License.Server.zip** into your Desktop
2. open Terminal
3. type **cd ~/Desktop/Ultimate.RLM.Floating.License.Server/RLM\_Linux-64/**
4. type **chmod +x ./rlm\_client.sh**

To Install the Licenses on your client[s]

type **./rlm\_uninstall.sh --add YOUR\_SERVER\_HOST\_NAME**

**OR**

type **./rlm\_uninstall.sh --add YOUR\_SERVER\_IP\_ADDRESS**

For example your server Host Name is : **vfx\_server**

**./rlm\_uninstall.sh --add vfx\_server**

For example your server IP Address is : **192.168.1.50**

**./rlm\_uninstall.sh --add 192.168.1.50**

To Uninstall the Licenses from your client[s]

**./rlm\_uninstall.sh --remove**
